

Claim 8. (Amended) The imaging machine according to claim 5,  
wherein said magnet for said magnetic cylinder comprises at least  
one permanent magnet for magnetically attracting the magnetically  
attractable printing plate.

Please add the following new claims:

-- 23. An imaging machine for setting an image on a printing  
plate, comprising a magnetic cylinder having at least one magnet  
for holding the printing plate firmly during the setting of the  
image thereon, said magnetic cylinder also having a register  
system for aligning the printing plate during the setting of the  
image thereon and further having at least one clamping device  
disposed separate from said magnet for firmly clamping the  
printing plate.--

-- 24. An imaging machine for setting an image on a printing  
plate containing a material which can be attracted magnetically,  
the imaging machine comprising a magnetic cylinder for directly  
holding the printing plate firmly during the setting of the image  
thereon.--
